

## Young associates wanted for candidate of candidate to promote healthier globalization and our framework

It is important for us to steadily recognize we are living in a safe society without worry through a movement toward a peaceful better world. When Artificial Intelligence (AI) can be replaced by our tasks, we are almost free from the obligation to work. You would have more time to think about what is your happy life and what you want to do. It is likely we can live longer with the advance of technology and science in the future. It might be a good opportunity that you can think deeply about your 'life and death'. Or science can also lead a certain level of understanding about 'life and death'. It means we are in the turning point of a great paradigm shift in the long history of mankind because we would soon come across the vague situation between 'life' and 'death' in the future. The one of reasons we managed to be in this era could be because of religion. Religion has helped to form communities at different levels and bond the communities. The existence of gods in religion has convinced mankind about the unexplained phenomenon from an invisible place such as heaven and the world after death. Interestingly, most of the gods (prophets) in the major religions have human figures or animal figures sometimes. I would like to emphasize it is humans, not robots or not aliens. It is a strong implication for our future because it is what our ancestors believed and went down to us.

Since we are alive, obviously we are on 'life' side in life and death and therefore we have to think about the situation in our world as far as you are alive. I should also remind that the 'life' would likely become a very long one in near future because of technological growth. It means, for example, if you are Christian, you might experience the resurrection including Jesus Christ in this world after Armageddon because your life is elongated up to ideally immortal due to the advance of biotechnologies such as anti-fatal illness and anti-aging areas. Thus, if we appreciate the religions conveyed by our ancestors, we should prepare for the upcoming important historical events. We should reorganize our knowledge so that it consistently makes sense. It is important for us to keep pursuing our ideal world. If we want a peaceful world, we should resolve our problems peacefully. It is not a solution even if you try to respond nicely or keep quiet to Authorities and powers such as Illuminati because their insincere attitudes amplify. It is also important to leave space for them to fix the problem by themselves. Because the problem has already spread worldwide and the situation is complicated with full of lies. For example, we should take into account that there are a certain amount of people who are aggressive and prefers to participate in war. Therefore, we should leave space/places for them to release their negative energy. We think Metaverse is a good technology for soldiers to conduct wars and battles. A realistic virtual digital world can provide them a place to 'kill' each other. When their consciousness and brain recognize the virtual world as real, they would indeed die by an illusion like [drug addicts](#). Such days might come soon to satisfy old-fashioned people saying, 'I can die for our country or our family'. They can literally die for their country or family, and it is also possible to leave money as they wish. The advance of virtual reality (VR) technology enables us to coexist with both peaceful and unpeaceful people on the earth. However, the real problem for the countries and the families which ask soldiers/their families to die is if they (the country/ the blue blooded-family) can survive in long term. Because they can get money in the short term, however, it does not mean the prosperity of the family or country in long term. Comprehensively thinking, it looks like unpeaceful people/families/countries are choosing extinction as their goal in long term. Thus, it is one of the good implications for peaceful people/peaceful families to start to consider leaving the unpeaceful country when you see your country leader try to participate/incite war. Once we create/find temporal countries to accept such refugees for peaceful world. We think it is already feasible in theory. But we prefer the slow landing strategy because we would like to believe the power of ethics and we also like to resolve problems peacefully. It requires an honest attitude reflecting your mind and education.

After experiencing a capitalism-centrism society, we can expect the rich as winners to enjoy creating new countries. It is good for us if they can contribute to the happiness of their people because wish people happiness. The new countries would be successful if the leader is good at reigning their country as well as making a good impression on other countries. Otherwise, the country is extinct. It is natural selection. One of the points is a welcoming attitude for refugees because they are having hard life between death and life. If they are able to survive thanks to the countries, they would not forget the helpful attitude. (We know there are many false sincere people. True sincerity or false sincerity does not matter for the paradigm shift in terms of pragmatism. It is a good start at least for our ideal world.) Anyways such an attitude leaves a good impression, and we believe it would become truly sincere in the long term if you continue. (That's why attitude is important.) We are trying to reborn healthier capitalism from money worship and have a healthier lifestyle. It means we should not work hard or too much. If we want to have a peaceful world, we should resolve problems peacefully. If we want to be healthy, we should have a healthy lifestyle. We believe it is important for us that our daily life embodies our goals in practice. Money worship society resulted in over-money demands in any occasion. Thus, if you don't consider 'earning money' while working, you are free from money worship. Since we aim for healthier capitalism, we proceed as NGO/NPO in this global movement. However, we are proposing a new standardized framework for the political system. We welcome candidates who want to be a leader of the country in the future. Since it also involves financial support for the framework, we also welcome candidates who want to be a founder of a company or founders of a new country. The advantage of capitalism is that money is a good measure of valuables for us. Since it seems like there is a lot of information about talents who would potentially earn lots of money in the future, the talents do not have to really look for job opportunities because job agents approach them and negotiate good salaries for them. If you are talented, you don't have to worry about money. Thus, we don't have to worry about money, and we should take care of people who are worrying about money. It is important we do not deny Capitalism, but we need healthy Capitalism to avoid "100% profit guaranteed investment". Because we believe it is the source of unfairness and the division between

poor and rich. (For details, please look at the [Japanese page](#). We described it because the Japanese government's role is important.) As decent and sincere globalists, we need to appreciate the distinctive own culture of each country. Otherwise, we would lose diversity. It is the recessive inheritance of society and an unhealthy cycle.

We propose a framework based on a uni-coin system that enables all of people to assure our life as far as we alive. The basic principle behind this is the country is reigned by the residents of their land. If they need help, it is an implication that they cannot be independent. (We are trying to propose a [standardized framework](#) of their administration for a better world.) Since it is a challenging attempt for existing countries because they require to restructure their system and structural reform for efficiency. We would like to reuse the assets already made, and slowing down so that we can follow their restructuring process. Our soft-landing strategy tries to avoid an abrupt change in society and economic stagnation in each country in the world. The countries require time to consider their strategy to maximize their national benefit through fair competition. On the other hand, our goal for globalization is ambitious. We also require time to design a fair framework through the paradigm shift. We also need to consider accountability, transparency, and understandability. Luckily, countries and we both require time and we want to slow down to be healthy.

To avoid a conflict between countries and us, we do not interfere in domestic affairs unless countries share specific problems with us. If many countries complain because of one country's selfishness and misbehaving, we might start to consider disconnecting the country from our system. However, it is not likely to happen because we are connected. Although we are happy to solve your problems, we would not discuss domestic problems unless the problems are shared for the aforementioned reason. We are looking for young candidates with good motivation. Since it requires careful consideration, we limit the number of candidates to one from one country as well as the total number. We need joyful people who can picture their enjoyable future. We might want to set a term for the limited position when it is too popular.

If our plan is successful enough, our candidate could be the candidate of ambassador, for example. It is also on your capability if you want to be the global ambassador because it requires Oracle's designation. You might aware that it is a recruitment for candidate of candidate. If candidates want, they can organize the network to meet other countries' oracles to gain other countries' designation. Since we face a lack of funding at this moment, we hope candidates bring their cost of living (e.g. food, accommodation, and so on) plus additional contribution such as a web server maintenance fee. It would be nice if candidates can help each other. For example, one candidate let other candidates stay in her/his place. Then, we can save money and can afford to make another investment.

We also appreciate people who are willing to support us having the same goal. Since we would like to avoid any manipulation, we only accept donations without asking for anything in return. However, we would rather hope such supporters select the candidate by themselves and suggest the application with no-obligation funds (scholarship). Then, the selected candidate can budget for her/his project with other candidates or her/his own team members (they are not counted as the candidate). However, we would like to prohibit excessive money-worship attitudes and manipulation using money distribution. We suggest investing in things such as experimental equipment or activities such as recreation to enjoy life together. We also suggest the project leader presents a clear goal to avoid misunderstandings within the project. We would like to emphasize that we don't want any trouble and legal problems. So, **please do not approach us if you are trying to involve in legal trouble as well as unhealthy trouble**. Also, we hope applicants explain the potential/expected risks that we might have.

Currently, we disclose 11 challenging projects proposal as examples. Please note some of them are optional for deterrence because it requires understandings of society. Better ideas are welcome. Although it is challenging, we hope we can enjoy learning together. We plan to write papers when we have the outcome. Since we also need to confirm in detail, we expect it would take time to publish. Note that there is no obligation or responsibility for candidates to participate. However, team members would be affected if you are a project leader who wants to quit. It is up to the leader's morals and ethics how the leader thinks about the responsibility. Ideally, candidates should work full-time on-site until we establish mutual trust. Thus, if you have your own financial supporter, we assume you already have a good relationship with your financial supporter. We would appreciate if you can support our travel costs if we cannot afford them. We appreciate welcoming countries very much and we are basically happy to visit welcoming counties.

NOTE: Since we aim to bond with trust, we value transparency within a family. We are aware that optional projects require broad understandings from people in many countries and solid members. Although we plan to take care of the information leakage as much as possible, **please be aware we don't have NDA within a family and explicit members**. It is hard to avoid if applicants are selfish and intentionally leak the information. It is also noteworthy that it is hard to avoid information leaks from your electric devices such as laptops, mobile phones, etc. Thus, **applicants could offer better options or opportunities for us to improve the situation if you notice potential problems**.

## 1. Bio/AI research

We would like to study methodologies about Artificial Intelligence (AI), design for protein, DNA/RNA as well as its application such as big data analysis. The candidates might be expected to play a role as a mediator among research institutes and pharmaceutical companies which want to collaborate with us once our data is ready to share.

## **2. Optional: Webserver for trade (Government people like an ambassador should be involved)**

Good for IT system learners. We are planning to construct a [trading system](#) coupled with FX trade. When we launch the system, the role is going to shift to the [ambassador](#). The profit is supposed to be used to maintain the [world government](#).

## **3. Optional: Simulation about uni-coin/population and sustainability**

We are hoping that [Uni-coin](#) is going to be the base of the social system. To get ready for the upcoming society, we would like to discuss what kind of policy is going to be beneficial avoiding unnecessary interference in domestic affairs. However, we have [a standardized proposal for countries](#). Currently, macroeconomics appears to put weight on each country's national benefit. We would like to put more weight on the global economy. Good for future politicians and ambassadors.

To promote world peace, it is important to assure the safe transaction of uni-coin. The basis of the transaction is trust among trusted people in the world who would like to contribute to world peace.

## **4. Optional Trust guarantee app (ID verification)**

To avoid impersonation, the user account has to be verified by the user's location and so on. We can build a network with sincere people and we call them like 'Notarizer'. They confirm photo IDs so that they are indeed the persons who show the photo ID. By creating a protocol about **blockchain with ID information**, we can realize safe and secure transactions for contracts, transactions, and so on. Thus, blockchain technology can avoid the falsification of files and we can know who is responsible for the blockchain.

## **5. Optional: Criminal group tracing tool (It is optional because it is a police's job)**

We also would like to know how much IT companies and banks, and financial institutes cooperate for international crime eradication. This is optional so that self-reporting Illuminati or people who took the money with scammer-like behavior (e.g., James Mason) would not approach to disturb us. We don't like their attitude. Sincere collaboration is acceptable though, they should tell us the topic of the collaboration right after the greetings. We don't like to participate in any crime relevant activities. **Note, we won't pay self-reporting Illuminati any initial cost. We are planning to make the source code open eventually so that it can be implemented into SNS.** Considering privacy and to avoid manipulations, it is recommended to have the following functions to gain trust.

By using [Twitter API](#) and other [SNS](#), we analyze human networks (Ref: [figure1](#)) from merely disclosed data and detect criminal groups for deterrence. The technology can be applied to the AI police for our privacy.

## **6. Optional: AI algorithm for a logical lie detector (It is optional as Microsoft and Google AI perform better).**

We might want to develop an algorithm to detect the [logical lie](#) in the statement using AI. This is currently optional because humans are also good at detecting lies. We might need it on the occasion of fair judgment such as in court.

## **7. Optional: IT apps**

We might want to develop a secure system, and anti-fraud technologies, especially for the Medical field (We don't like misconduct such as data swaps in X-rays, blood work, and so on), and Insurance, public services, and so on. We might also want to promote the convenience of the internet service for the poor. Push/suggestion function for important notice would be kind.

## **8. Optional: Free Distributed shared storage by the user community**

Free storage system to store encrypted files for other users so that the important files cannot be tampered.

## **9. Optional: Mental health care**

Under consideration.

## **10. Optional: Standardization of morals and ethics**

Beyond the differences of culture, we must share common morals. We extract important behavior as a consensus by learning religious teaching and philosophical knowledge.

## **11. Optional: Electric appliances (For developing countries)**

We might want to develop a secure mobile phone charger ourselves that can check the stability of the local power supply.

Please let me know if you are interested (Ref: <https://wataru.nishima.jp/> email: wataru'at'nishima.jp or w.nishima'at'gmail.com 'at'=>@)

#### About hours

Currently, I don't have any restraints. However, I am planning to work to return my US debt to Enterprise Bank & Trust, Discover, and Amex.

==== [about confidentiality](#) ===

Although I would like to take care of privacy and confidentiality, we cannot promise the confidentiality of our study. The exception is the case you can provide the IT tools, place to live, and protocols not to leak. If it is perfect, it would be possible. However, my recommendation is not to care about confidentiality. As shown in the pages, we believe we should fix it by standard ethics and kindness. Since we would like to adopt a soft-landing strategy so that people can follow the change smoothly, we hope the info in the webpage is confidential.
